RediFLOOR - Retail and Commercial Staircases

Redifloor provides a full design and installation service in finishes as diverse as stainless steel, timber, glass or chequer plate steel.

Balustrades can be constructed with glass infill panels, horizontal stainless

steel rails, clamped structural glass or vertical stainless steel spindles.

The supporting steel structure can be supplied in satin finish stainless steel, hot dip galvanized, or painted to any RAL or British Standard colour.

Approved products

Stainless steel and glass constructions are trademarks of modern architecture. Yet, it's no paradox that a material as fragile as glass can meet today's strict building code requirements. The only clamps we use comply with European standards so you can be assured that they are absolutely secure..

Various Finishes

Stainless steel handrails are available in satin or mirror polished finish. Timber handrails are also available in various hardwoods and in a variety of finishes. Stainless steel end caps, straight and corner connections complement these handrails through their distinguished, contemporary design. Clamps are also available in a matt chrome, chrome plated or brass plated finish. Alternatively, they can be painted to any RAL or British Standard colour.

External Systems

316 Stainless steel is a high grade metal which, besides chromium, nickel and molybdenum consists mainly of steel. Due to this composition, when used outdoors, surface corrosion can occur. This can be avoided by treating the installation with on .

Glass Products

Toughened glass has up to five times the strength of ordinary glass. It is widely used in domestic and commercial buildings where greater impact resistance is required. We only use toughened glass which is fully polished and available in various finishes and colours. In addition, the glass can be supplied frosted or painted to any RAL or British Standard colour. We can also digitally apply corporate logos to the glass.
